Hi Rita,

Here is an EPA statement regarding the second round of sampling results. And yes, for now we are still providing alternate water to 4 homes in Dimock -- Terri

EPA has completed and shared with residents and Pennsylvania state officials the second set of sampling at 20 private drinking water wells in Dimock, Pennsylvania. This set of sampling did not show levels of contaminants that would give EPA reason to take immediate action. EPA remains committed to providing Dimock residents with the best available data and information on the quality of drinking water as expeditiously as possible.

For more information on the sampling results, visit: <http://www.epa.gov/aboutepa/states/pa.html>

Hi!

Please send me the press release on the final results of the tests on the well water of the 20 homes in Dimock.

Will you continue to supply water to the four homes?

Thanks so much!

Rita
